

SIDING

We offer only top of the line, premium siding products at prices to fit any discerning homeowner's budget. All of our siding products carry full manufacturer warranties, are much thicker and stronger than the industry average, and we warranty the labor. The only thing you'll have to worry about is how to choose from so many types, finishes, accessories, and colors.

Cornerstone Home Improvement has been awarded the **Aside** "Exterior Designer's Award". This award is given only to those companies who continually strive to achieve high standards of excellence, with proven attention to detail and the use of quality products. Approved as a **Royal Building Products** "Royal Gold Crown Dealer" and a **Reynolds Building Products** "Certified Home Improvement Specialist", Cornerstone Home Improvement has been identified as one of the top installation professionals in the business. This is a select group of companies who exhibit consistent excellence in product knowledge, installation skills and customer service.

At Cornerstone Home Improvement, our focus is building customer relationships that will last for decades. We want everyone who does business with us to think of Cornerstone as the Premier Home Improvement Company, with service second to none!

Why Buy Vinyl Siding?

We know that today's customer wants to get what they pay for. We understand that you want low maintenance, proven product performance, professional workmanship, and strong, transferrable warranties. Understanding that first impressions count, we recognize that you want long lasting beauty.

Vinyl Siding Facts:

Vinyl siding was first introduced to the exterior cladding market in the early 1960s and steadily grew in popularity over the next four decades because of its durability, versatility and ease of maintenance. The product is manufactured primarily with polyvinyl chloride, a material that gives it impact resistance, rigidity and strength.

Today, vinyl siding is the number one choice of exterior cladding across the

country. U.S. Census Bureau statistics show twice as many homeowners side their homes with vinyl than with any other material. The facts are that vinyl siding is available in a broad palette of colors, profiles and trims to assist architects, builders and homeowners in customizing their new construction and renovation designs, and can complement historical restoration projects. Planners, developers, architects, builders and homeowners are siding with vinyl in record numbers. Why? Because today's vinyl siding provides distinct advantages.

Rich colors. Dramatic profiles. Guaranteed durability. All at the lowest installed cost of any siding material.¹

"The Vinyl Siding Institute Website" 1. 2006 R.S. Means Residential Cost Data

- Vinyl siding's share of the market has approximately doubled in the last decade
- While vinyl siding has risen in popularity over the years, traditional wood materials are on a marked downswing.
- Vinyl siding is the most preferred material overall in both new construction and remodeling. In addition, vinyl siding is increasing popular in use in all home segments, from starter homes to luxury homes.

Tyvek Home Wrap Providing the best balance of weather protection, moisture management and durability. With more than 30 years of residential performance on millions of homes, DuPont™ Tyvek® HomeWrap® is the world's leading housewrap.

DuPont™ Tyvek® HomeWrap® has the optimum balance of properties for superior performance against the elements and the competition. When using Tyvek® HomeWrap® you can be assured you are using the brand leader in weather resistant barriers.

A weather resistant barrier is a building's main protection against the damaging effects of the elements. A functioning barrier must include four basic properties:

- It must have a high level of AIR RESISTANCE - to help prevent drafts, reduce energy bills and resist the flow of moisture laden air through wall cavities.
- It must have a high level of WATER RESISTANCE - to help protect the wall cavity from water that gets behind the cladding.
- It must have moderate to high VAPOR PERMEABILITY - to promote drying in wall systems.
- It must be DURABLE - to withstand the rigors of the construction site and continue to perform once construction is completed.

DuPont™ Tyvek® HomeWrap® is a non-woven, nonperforated sheet made by spinning extremely fine continuous high-density polyethylene (HDPE) fibers that are fused together to form a strong uniform web. DuPont™ Tyvek® is a unique brand and the only product manufactured this way. This tough, durable and unique structure is not susceptible to the compromises of a perforated material. The fibrous structure is engineered to create millions of extremely small pores that resist bulk water and air penetration while allowing moisture vapor to pass through. DuPont™ Tyvek® HomeWrap® achieves the ultimate balance of weather resistance and vapor permeability.

DuPont Residential Warranty

DuPont™ Tyvek® Weatherization Systems products come backed by a **10-year limited warranty**, providing added assurance that the homes builders construct will continue to protect a homeowner's investment for years to come.
